

FOOD RANGE

A hygienic and low contamination risk environment is of great importance in the food industry. The Van Moer food range assures you a high-quality solution in the prevention of contamination and infection risks during the production and handling of food or its components by your workers.

The Van Moer food range, which is set up according to the DIN 10524 norm, covers the full range of garments including coats, jackets, trousers, coveralls, and bib & braces. We use high-quality fabrics and accessories to ensure garments that will last.

Ergonomic fitting

Since your workers have to feel good in their clothes and respect the hygienic regulations at the same time, we have paid special attention to the fitting and the design of the Van Moer food range. Easy to wear, comfortable, tailored to fit and safe towards the product are our key points for your garments.

Ideally suited for industrial laundering

To guarantee and maintain the hygienic requirements, your garments are preferably washed by an industrial laundry. The Van Moer food range is ideally suited for the most demanding processes, so you are always assured of optimally hygienic garments.

Materials

For our fabrics and accessories, we only work with reputable suppliers who deliver consistent quality through their quality systems, thus offering you and your customers a high level of trust, sustainability and security.

Quality label

Van Moer has been your specialist for workwear since 1922. The company policy concerning quality and manufacturing is your warranty for outstanding garments. The success of our approach lies in continuously improving our sustainability performance in terms of the environment, labor and human rights, ethics, and sustainable procurement. For this approach, we are awarded with the EcoVadis Silver-certificate.

DIN 10524

DIN 10524 specifies requirements to minimize the risk of food contamination during handling and processing. It ensures that clothing is hygienic, functional, and made of materials that are easy to clean and resistant to absorbing contaminants. The standard addresses design features such as fitted sleeves and minimal external pockets. It provides guidance on the proper use and maintenance of workwear, including cleaning and laundering. The standard promotes clothing that is clean, safe, and suitable for protecting both workers and food products.

CLASS

3 Very high level of protection and security

The handling or processing of unpackaged, perishable foods. Ideal for the food and dairy industry in production and processing. The garment is certified according to DIN 10524 and meets all the requirements of risk class 3. The durable, breathable fabric provides high wearing comfort and adequate protection in accordance with the designated risk area for which it was designed. Design features include a high-necked collar, adjustable sleeves, and no external pockets to minimize contamination risks.

CLASS

2 High level of protection and security

For handling or processing of lightly perishable foods and ingredients. Ideal for the food and pharmaceutical industries as well as food retail. The garments in class 2, certified according to DIN 10524, are characterized by maximum durability, optimal fit, and comfortable to wear. All models are equipped with a minimal number of pockets, lockable inner pockets, concealed press studs, meeting all hygiene requirements.

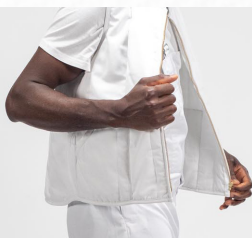

CLASS

1 Low level of protection and security

For handling or processing of foods or ingredients that are non-perishable. Ideal for the food, pharmaceutical and packaging industries and their suppliers for these industries. The garments are comfortable to wear, optimally fitted, and made from breathable fabrics. All models are equipped with outer pockets with press stud closures and/or lockable inner pockets. The trousers feature a thigh pocket for added functionality.
